

Angular

This is an original training document created for enterprise RAG, semantic search, embeddings, chunking and Odrant demonstrations.

Chapter 1: Angular Topic 1

Chapter 2: Angular Topic 2

This chapter explains Angular. Outline: Components, Services, Routing, RxJS, Forms. The discussion covers concepts, architecture, implementation steps, best practices, enterprise use cases, interview questions, common mistakes, advantages, limitations and practical examples. These paragraphs are intentionally verbose so that document readers, chunking algorithms, MiniLM embeddings and Qdrant semantic search have sufficient text to process.
