

ASP.NET Core MVC

Action Return Values

By Achyut V. Kendre

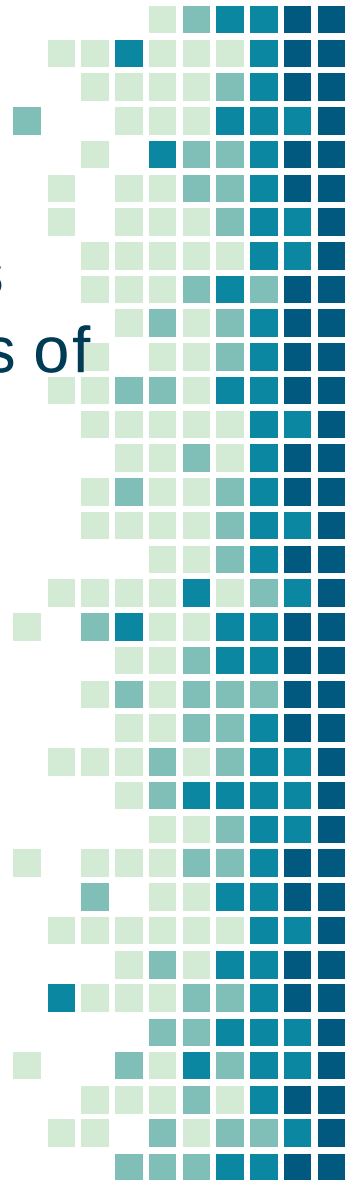

Today's Learning.

- Action Result
- View Result/ Partial View Result
- Redirect Result / Redirect To Action Result
- Json Result
- File Result
- IHttpActionResult

Action Return Types

- Action can return a primitive types of data as well as special type of result called ActionResult or sub types of ActionResult.
- ViewResult
- PartialViewResult
- RedirectResult
- RedirectToRouteResult
- JsonResult
- FileResult

Action Return Types

- **ViewResult:-** will be return type of action if you want to return a view from the action.
- **PartialViewResult:-** will be return type of action if you want to return a partial view from the action.
- **RedirectResult:-** will be return type of action if you want to divert the user to some url. You can redirect the user using a method `Redirect(url)` as a parameter.

Action Return Types

- RedirectToActionResult:- redirect to action result will be return type of action if you want to divert the user to some action. You can divert the user to some action using method –

```
RedirectToAction("Actionname",  
["Controllername"], ["routervalues"])
```

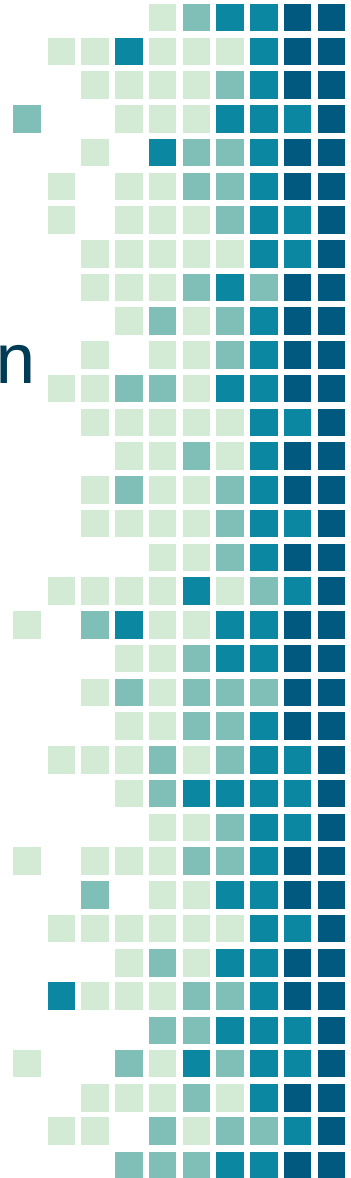

Action Return Types

- JsonResult:- will be return type of action if you want to return result in the form of json. You can return a json from the action using method –

`Json(object);`

- FileResult:- will be return type of action if you want to return a file from the action. You can return a file from the action using a method -

`File("Filepath","contentType")`

Action Return Types

- **ContentResult:-** will be return type of action if you want to return some content from action like ascii, text, Unicode etc. You can return a content from the action using method –

`Content(object);`

EmptyResult:- will be return type of action if you want to return empty/ nothing or null.

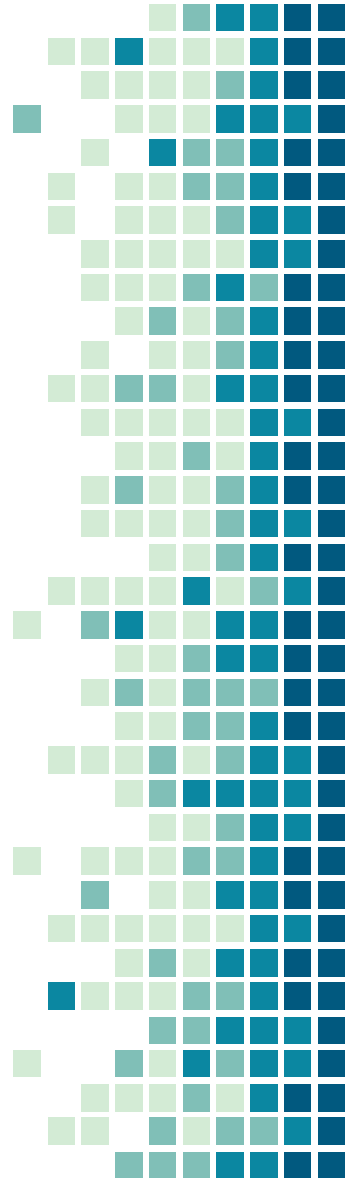

ActionResult

- The IActionResult return type is appropriate when multiple ActionResult return types are possible in an action.
- The ActionResult types represent various HTTP status codes. Any non-abstract class deriving from ActionResult qualifies as a valid return type.
- Status Code Results
- Status Code w/ Object Results
- Redirect Results

IActionResult

- Json Result
- File Results
- Content Results
